

Це вже не перший мій тестовий акаунт AWS. Минулий я не видаляла, просто виключила всі сервіси. Потім десь відбувся витік даних, в яких був і мій пароль (який я пхала всюди де можна). Мій AWS взламали і за мій кошт використовувати якісь сервіси*

Кулсторі щоб було не так нудно перевіряти

До речі через це було трохи проблематично створити новий акаунт, точніше верифікувати його

Create key pair

Key pair name

Key pairs allow you to connect to your instance securely.

lll

The name can include up to 255 ASCII characters. It can't include leading or trailing spaces.

Key pair type

☒ **RSA**
RSA encrypted private and public key pair

☐ **ED25519**
ED25519 encrypted private and public key pair (Not supported for Windows instances)

Private key file format

☒ **.pem**
For use with OpenSSH

☐ **.ppk**
For use with PuTTY

 When prompted, store the private key in a secure and accessible location on your computer. **You will need it later to connect to your instance.** [Learn more](#)

Firewall (security groups) | [Info](#)

A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.

☒ Create security group

☐ Select existing security group

We'll create a new security group called 'launch-wizard-1' with the following rules:

☒ Allow RDP traffic from

Helps you connect to your instance

Anywhere

0.0.0.0/0

☐ Allow HTTPS traffic from the internet

To set up an endpoint, for example when creating a web server

☐ Allow HTTP traffic from the internet

To set up an endpoint, for example when creating a web server

⚠ Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

Try for free  

Instance ID
 i-0588abe3839caf643 (valnoziforgoit)

Connection Type

 **Connect using RDP client**
Download a file to use with your RDP client and retrieve your password.

 **Connect using Fleet Manager**
To connect to the instance using Fleet Manager Remote Desktop, the SSM Agent must be installed and running on the instance. For more information, see [Working with SSM Agent](#) 

You can connect to your Windows instance using a remote desktop client of your choice, and by downloading and running the RDP shortcut file below:

 **Download remote desktop file**

When prompted, connect to your instance using the following username and password:

Public DNS
 ec2-3-223-125-165.compute-1.amazonaws.com

Username Info
 Administrator 

Use your private key to retrieve and decrypt the initial Windows administrator password for this instance.
